DETAILED ACTION

Drawings

1. The replacement drawings were received on 2/15/06. The drawing is objected to because the characters and lines are not clear.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 5-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Suzuki et al. (JP-11-121820).

Suzuki discloses a piezoelectric actuator (1) comprising a multilayer construction of piezoelectric layers (2) and inner electrodes (3), which are located in a piezoelectrically active region between the layers and can be acted upon by an electrical voltage, and at least one inactive region (upper and lower sections) without inner electrodes in the layer construction of the piezoelectric actuator (1), wherein the at least one inactive region without inner electrodes is formed of a material whose mechanical and thermal properties match the mechanical and thermal properties of the active region, including the combination and interaction of the material comprising the piezoelectric layers and the inner electrodes.

Suzuki discloses that using a silver palladium alloy material and the ceramic material allows a close characteristic of shrinkage of the internal electrodes and the piezoelectric ceramic, therefore making possible to avoid cracks and interfacial separation.

(Abstract)

According to Suzuki, the inactive regions and the active region are made from an identical ceramic basic substance, with additional dopants (silver palladium) inserted into the inactive regions.

Regarding claim 7, in paragraph 15 of the machine translation provided with the reference, Suzuki discloses the basic substance being lead zirconate titanate (PZT), and the dopant is silver.

Regarding claims 8-10, Suzuki discloses the thermal expansion, the elasticity, and the shrinkage upon sintering of the multilayer construction of the piezoelectric actuator as the matching mechanical and thermal properties of the piezoelectric layers of the inactive region and of the active region. Specifically, Suzuki discloses the shrinkage characteristics due to the sintering process.
